PRIME PLUS

With ImageSense deep learning technology, this is our most accurate BladderScan instrument ever. With one button press, ImageSense draws on a deep neural network of tens of thousands of ultrasound images to achieve unprecedented accuracy.*

BVI 6400

The handheld BVI 6400 offers unprecedented portability and versatility in multiple clinical settings. Its voice annotation feature lets clinicians save up to 10 patient exams for patient identification and record-keeping.

BVI 6100

A streamlined version of the BVI 6400, this portable 3D ultrasound device quickly and accurately measures urinary bladder volume and PVR. Plus, exam data can be delivered to EMR systems using Scan Point Image Management.

AVAILABLE FEATURES

IMAGESENSETM

Only BladderScan Prime Plus™ is built on ImageSense technology, a proprietary deep learning Artificial Intelligence platform that leverages real-world data, defining bladder location, size and shape for every patient, accurately measuring urine volume.*

VMODE[®] TECHNOLOGY

In less than 5 seconds, VMODE technology automatically captures 12 B-mode slices of the bladder, and displays the calculated volume results. VMODE automated 3D quantification of bladder volume helps clinicians assess bladder function quickly and confidently.

SAVINGS CALCULATOR

Available onboard Prime Plus, the BladderScan Savings Calculator provides default values for calculating cost savings that result from scanning rather than catheterizing patients. Settings can be customized for your facility.

SCAN POINT®

Scan Point image management software provides viewing, printing, and secure online storage of patient exams, including images and voice annotations. Scan Point lets you link patients, exams, and electronic health record systems (EHRs) through easy-to-use screen interfaces.

PUBIC BONE INDICATION

C-mode post-scan aiming guidance notifies users of pubic bone interference and off-center scans – factors that can affect accuracy. The visual representation of these factors provides greater confidence that exam results measure the entire bladder.

CALISCANTM

In the event of a drop, Prime Plus ultrasound probes feature an onboard self-diagnostic to confirm proper function.

BLADDERTRAQTM

Prime Plus live pre-scan aiming includes an onscreen bladder capture feature that highlights and outlines the bladder, helping ensure accurate scans.

EDGESCAN

Prime Plus post-scan aiming guidance notifies the clinician if the entire bladder has not been fully captured in the ultrasound field, helping ensure accurate bladder measurements.

PHI & SETTINGS PROTECTION

Prime Plus offers an option to prevent unauthorized access to saved exams and device configuration settings.

CAUTI PREVENTION

Urinary catheters have long been associated with higher UTI rates, longer hospital stays, and increased costs. In one national study, 180% of nosocomial UTIs resulted from the use of indwelling urinary catheters. A separate study² revealed that each UTI in the ICU carried an average cost of \$8,700. In a real-world example of a 100-bed facility,³ the BladderScan ROI calculator projected savings of over \$150,000 by incorporating BladderScan units into the facility's protocols. Since its introduction, noninvasive BladderScan ultrasound technology has prevented countless unnecessary caths.

of all nonsocomial infections are urinary tract infections (UTIs)

of nonsocomial UTIs come from indwelling urinary catheter use

2 DAYS is the average increase in a hospital stay for an ICU UTI
